

Change in the High School Report Card: Moving to Numeric Grades

In an attempt to create a report card that more accurately reflects student performance, the high school report card will now report the numeric grade for each course each quarter. The report card will report the numeric grade and a table on the report card will allow the parent to convert the numeric score to an alpha grade (see below).

In the computation of the final grade, SchoolMax will average the quarterly grades. For example, a student who receives the following quarterly grades: 38, 69, 74, 78 would receive a final grade of 65 (64.75 rounded up to 65). The final grade would be an alpha value (A, B, C, D and E).

The computation of honor roll, weighted grading, valedictorian and salutatorian and the printing of the transcript will not be impacted as SchoolMax will continue to use the alpha grade formula.
